Book Summary

This book supports science teachers, teacher candidates, and science educators preparing to implement science curricula that recognize Indigenous knowledge as a foundational way to understand the physical world. Indigenous and scientific ways of knowing nature have similarities and differences, as well as strengths and limitations. By exploring these in detail based on academic scholarship, the book guides the reader in building their own cultural bridges between their scientific world and the world of an Indigenous community; bridges that lead to a culturally responsive science classroom. These cross-cultural capabilities can be applied to multicultural classrooms in urban settings.

Based on the experiences of cross-cultural science teachers and researchers worldwide, including the authors’ experiences, the book concludes with practical general advice that helps prepare teachers for developing science lessons and units that combine the two knowledge systems according to a ministry or department of education’s expectations.

The book demonstrates how the intellectual tradition of the scientific community coexists with the wisdom traditions of Indigenous communities. This benefits the scientific literacy and insights into nature of both Indigenous and non-Indigenous students. The goal of a cross-cultural school science is for all students to learn the best from Indigenous and scientific ways of understanding nature.

Table of Contents

Prologue

Chapter 1  Introduction
Recent and Coming Changes to Science Curricula
A Vignette
What the Book is About

Chapter 2  Reasons for Placing Indigenous Knowledge in School Science
Equity and Social Justice
Strength of A Nation’s Economy
Improvement of Eurocentric Science
Preparation of Science-Oriented Students for Science Careers
Indigenous Sovereignty and Cultural Survival
Enhancement of Human Resiliency

1
Chapter 3  **Eurocentric Science – Background**
A Quick Look at the Historical Evolution of Eurocentric Science
Scientists: Who are They?
Other Views of Eurocentric Science
Worldview
The Culture of Eurocentric Science
The Problem with Universalism
Clarification of Science

Chapter 4  **Eurocentric Sciences**
Diversity within Eurocentric Science
The Myth of the Scientific Method
A More Realistic View of Eurocentric Sciences
The Myth of Obtaining Objectivity
Fundamental Presuppositions
- Nature is Knowable
- Eurocentric Sciences are Embedded in Social Contexts
- Eurocentric Sciences have Predictive Validity
- Scientific Knowledge is Dynamic
- Scientific Knowledge is Generalizable
- Eurocentric Sciences Operate on Rectilinear Time
- Eurocentric Sciences Subscribe to Cartesian Dualism
- Eurocentric Sciences are Reductionist
- Eurocentric Sciences are Anthropocentric
- The Material World is Governed by Quantification
- Reality is Reproduced or Represented by Scientific Knowledge
- Empirical Data Speak for Themselves—Positivism

Chapter 5  **Indigenous Knowledge – Background**
Clarification of Indigenous
Clarification of Knowledge and Nature
Clarification of Coming to Know

Chapter 6  **Indigenous Ways of Living in Nature**
Fundamental Attributes
- Place-Based
- Monist
- Holistic
- Relational
- Mysterious
- Dynamic
- Systematically Empirical
- Based on Cyclical Time
- Valid
- Rational
- Spiritual

The Concept of Knowledge Revisited

Conclusion
Chapter 7  **Comparing the Two Ways of Knowing Nature**
Deborah’s Story
Hidden Pitfalls to Avoid When Comparing Cultures
   Stereotyping
   Language
   Different Versions of Eurocentric Sciences
Summary
Comparisons
   Similarities
   Differences
   A Scheme for Comparisons
   Classroom Applications
Conclusion

Chapter 8  **Building Bridges of Understanding: General Advice for Teachers**
Resources for Science Teachers
   Elder Involvement
   Community Contexts
   Role Models
   Teaching Materials and Resources
Indigenous Student Learning
Classroom Environment
Instructional Approaches
   Time-Honoured Indigenous Ideas about Teaching
   Other Approaches to Teaching
Deborah’s Story Revisited
Student Assessment
Indigenous Languages
Teacher Expectations
Mr. Chang’s Story
Conclusion

Appendix A  An Example of a Cross-Cultural Science Unit
Appendix B  Questions for Reflection and Discussion
Appendix C  Website Resources
Appendix D  Recommended Books about Indigenous Worldviews
